

FUEL SURCHARGE

The Fuel Surcharge Matrix found in Item 16 of the 400N Tariff has been revised effective May 15, 2006.

The new matrix provides a higher fuel “trigger price” of \$1.40 and widens the fuel price brackets effectively lowering the fuel surcharge percentage paid to the driver. However, a general increase of 3.5% to the 400N rates was implemented the same date recouping the lost fuel surcharge revenue as a general increase.

Please note: for contracts utilizing frozen rates prior to 5/15/06, the old fuel surcharge matrix will continue to apply. Consequently, we included an additional column in our Fuel Surcharge History Chart to report the fuel surcharge according to the old matrix (Frozen rates prior to 5/15/06) and also at the current, updated matrix (rates 5/15/06 and after).
